

# DAR

## POLLY COOPER CHAPTER

An **alias** is a second name, or in this case a second email address, attached to a person's account. When their account has a secondary email, they get messages sent to their regular account as well as the alias address.

**Jodi sends a message to:**

**regent@pollycooperdar.org**

(She wants to contact the chapter Regent, but she doesn't know her name.)

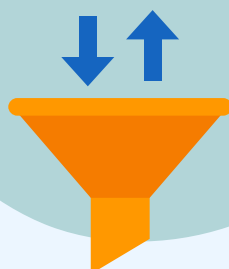

**Jodi's message gets to Google Console.**

It finds the  
"@pollycooperdar.org"  
part of the address.

**Google Console matches the address.**

It knows that regent@ is a secondary address for  
jill.smith@pollycooperdar.org

**Google Console delivers the message to Gmail.**

Jill Smith finds the message in her regular chapter inbox.
